## EXECUTIVE SUMMARY

<b>Background</b>	<p>SmartCow is a European project integrating key European cattle research infrastructures. Its objective is to promote the coordinated use and development of these infrastructures, and thereby help the European cattle sector face the challenges of sustainable production. By covering all the relevant scientific fields and the diversity of cattle types and production systems, SmartCow will provide easy access to high quality services and resources to academic and private research communities. For instance, access to research results, free trainings, national meetings with stakeholders and project applications TNA (transnational access) to conduct experiments in the project's infrastructures. Such services and resources are needed to develop innovative and ethical solutions for efficient use of animal and feed resources, promoting animal welfare and healthy livestock, as well as sustainable competitiveness.</p> <p>To build close links and synergies within the European research community working on cattle, the first step is to identify and characterize European research infrastructures.</p>
<b>Objectives</b>	<p>The objective of this task is to create an inventory that describes and maps the principal animal research infrastructures of the project partners.</p>
<b>Methods</b>	<p>A contact person from each research institute within the consortium was identified at the kick off meeting and their email address obtained.</p> <p>An exhaustive list of general information about the research infrastructures was developed and an excel spread sheet created to collect the data.</p> <p>Before sending to all project partners, the file was sent to a smaller group of people involved in the project to review and identify any areas which were missing or where more information was required. Once this sub-committee was satisfied with database, it was sent to the people within the consortium whose email addresses were collected at the kick off meeting.</p> <p>Once all information was returned it was collated into one document, validated and sent to partners working on Tasks 1.1 and 3.1 to allow them to further their respective work packages.</p>

<b>Results &amp; implications</b>	<p>The creation of a database cataloguing 12 research infrastructures of the SmartCow partners, corresponding to 19 installations (or facilities). This database will be used to create an interactive map, as well as for other work packages of the project.</p>

# 1 Description of the Database

## 1.1 Construction of the database

The objective of SmartCow project is to promote the coordinated use and development of European research infrastructures, and thereby help the European cattle sector face the challenges of sustainable production. In order to do so, the first step is to identify and characterize the research infrastructures of project partners.

In that purpose, a database was created on an excel file, in order to collect administrative information and catalogue the project partners' research infrastructures on:

- Site characteristics (rain fall, type of soil, rotation...)
- Feed systems (grazing, feed purchase...)
- Animal types and breeds
- Housing systems
- Animal handling facilities
- Laboratory facilities
- Ethical aspects

## 1.2 Collection of the information

To collect all the information needed, a pre-filled excel file was sent to person in charge of each research infrastructure. Then, the information was gathered in a unique database.

## 1.3 Infrastructures catalogued

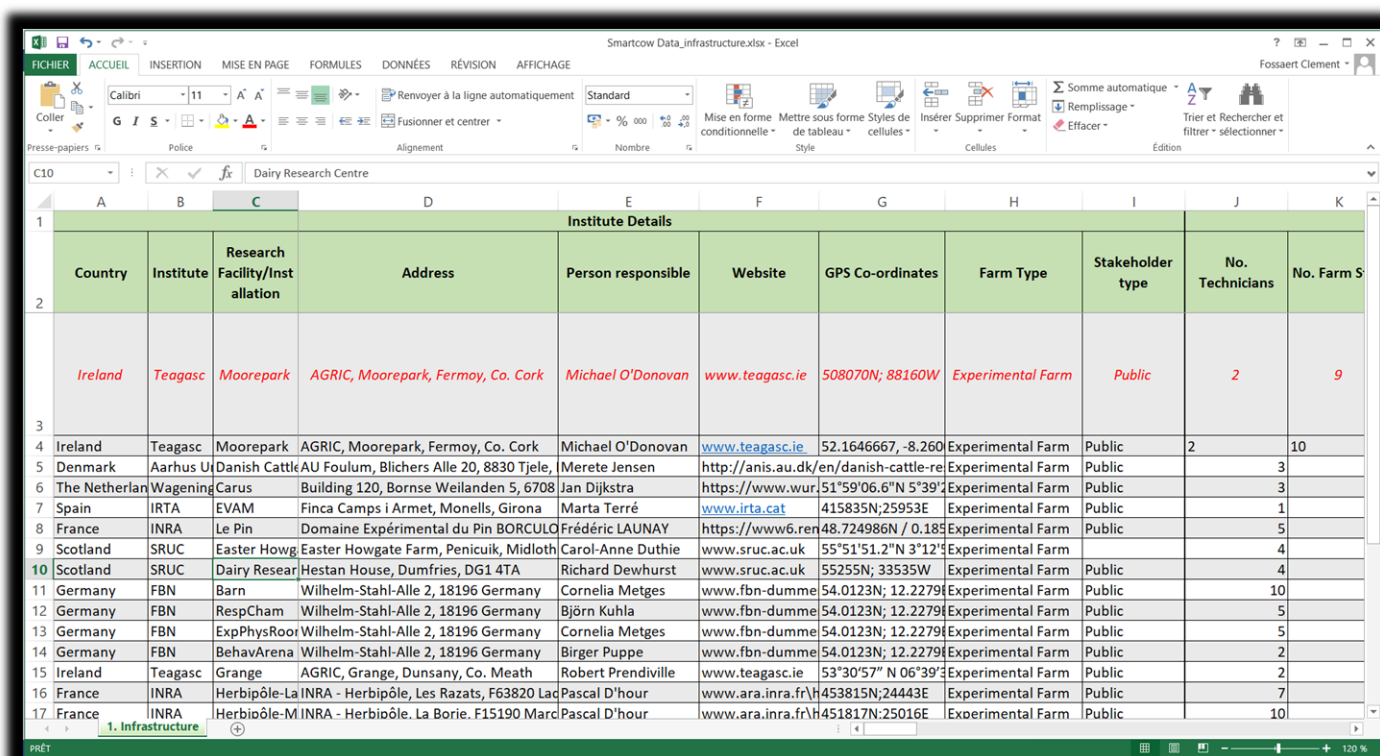

The final database gathers all the information, previously listed, from 12 research infrastructures. All the research infrastructures catalogued and their country are summarized in the following table:

Country	Institute	Research infrastructure	Installations
France	INRA	Pôle experimental bovin (PEB)	Le Pin
			Herbipôle-Theix
			Herbipôle-Laqueuille
			Herbipôle-Marcenat
Scotland	SRUC	Dairy Research Centre	Dairy centre
		Beef centre	Beef centre 1 & 2
The Netherlands	Wageningen University	Carus	Carus
The Netherlands	WU-DLO	Dairy Campus	Dairy Campus
England	University of Reading	CEDAR	CEDAR
Germany	FBN	FBN-EFC	Barn
			ExpPhysRoom
			RespCham
			BehavArena
Ireland	Teagasc	Moorepark	Moorepark
		Grange	Grange
Denmark	Aarhus University	Danish Cattle Research Centre	AU1 & 2
Spain	IRTA	EVAM	EVAM
Belgium	CRAW	Experimental dairy farm	??

## 1.3.1 Overview of data collected

To give an overview of the content of the database, the following are screen shots of the data which have(?) been collected and passed to the relevant people in Task 1.1 and Task 3.1 to allow them to progress their respective areas.

Country	Institute	Research Facility/Installation	Address	Person responsible	Website	GPS Co-ordinates	Farm Type	Stakeholder type	No. Technicians	No. Farm S

## 2 Use of the database

### 2.1 Creation of an interactive map

In order to portray the information collected, this database will be turned into an interactive map, created in google map form. First, the interactive map will localize and characterize the research infrastructure of each partner. All the infrastructures will be visible on the map with a label, and clicking on an infrastructure's label will give access to information about its localisation and research theme. A link will also lead to more detailed information about the staff, the facilities, the animals and ethic management, if needed. These information will be accessible to everyone.

Then, the mapping focus will extend beyond participating organisations within participating countries and finally to the rest of Europe. The second step will be to collect information about other European infrastructures and to add them to the map.

The aim of this map is to give more visibility to all research infrastructures, giving the possibility to every interested stakeholder to know what is available and where, leading to a better collaboration within European researchers.

## 2.2 Use in other work packages of the project

The collected information will also be useful for some other work packages of the project. For instance, one of the objective of the work package 3 is to define common guidelines for research and routine data recording, based on an inventory of experimental protocols and ethical aspects. The information about the equipment and the ethical aspects catalogued in this database can be a first draft of this inventory.

Moreover, this database and the interactive map created will give to the research infrastructures more visibility and these infrastructures will be more easily identified by European researchers, enabling an effective communication in the WP4.

## 3 Access to the database

### 3.1 Access to SmartCow partners

All the project partners can have access to the full database (excel file format) via the internal collaborative platform (a sharepoint).

### 3.2 General access

For non-partners, most of the information catalogued on the database will be available on the interactive map in the project's website :

- All Institute details (address, responsible person, website...)
- Site characteristics
  - Enterprise (dairy or meat)
  - Climate
  - Total land
  - Grazing land
  - Grazing season
- All Animal types and breeds
- Housing systems
  - Housing facilities
  - Number of individual housing
  - Individual feed intake facilities (Yes/No)
  - Metabolism facilities (Yes/No)
- Animal handling facilities
  - Holding area (Yes/No)
  - Automated drafters (Yes/No)
  - Hoof crushes (Yes/No)
  - Artificial insemination crush (Yes/No)
  - Auto or manual holding crush
- Laboratory facilities
  - Capacity to process blood sample (Yes/No)
  - Capacity to process meat sample (Yes/No)
  - Capacity to process milk sample (Yes/No)
  - Capacity to process digestive system sample (Yes/No)

- Capacity to process calorimeter/metabolism sample (Yes/No)
  - Capacity to process diet/feed sample (Yes/No)
  - Capacity to process DMI sample (Yes/No)
- Ethical aspects
  - Animal Welfare body (Yes/No)
  - Licence to perform experiments (Yes/No)
  - Name of the ethical licence body

If needed, the excel file can be available with the agreement of the person in charge of the infrastructure.

Moreover, following the EU General Data Protection Regulation (GDPR) approved by the EU Parliament on 14 April 2016 and enforced on 25 May 2018, we put in place a procedure in order to protect the data gathered in the database and the exchange of contact details between the person of interest and the project partner. Each party will have to sign a consent form available on the website in which they are allowing the process and exchange of data through the Data Protection Notice linked to the consent form that have to be signed.

## 4 Extension and updates of the database

In the course of the project, the database and the interactive map will be extended progressively to other research infrastructures on cattle within the institutions and the countries of the SmartCow consortium in a first step. In a second step, the mapping focus will extend beyond participating countries to the wider EU by the means of a questionnaire sent to EAAP international network. This will allow to establish as far as possible the research capabilities of all cattle research centres in the EU and updates of the interactive map (milestones in year 2, 3 and 4 of the project). This will be also the occasion of existing infrastructures to update their data in the database. Beyond the SmartCow project, the database can be reissued in future infrastructure projects.

## 5 Communication about the database

Some communication will be done concerning this database on the project's website.

The creation of the interactive map based on this database could be the topic of an article on the SmartCow newsletter or on SmartCow facebook account. The work done on the database will also support scientific communication at international conference in animal science.
